Your new Fender Instrument incorporates highest standards of craftsmanship and quality components. As a Fender Owner you can be proud and self-assured in the knowledge that you have the finest.

Your playing pleasure will be enhanced if you become thoroughly acquainted with all of the features of your instrument. Please read this instruction manual carefully and completely. If you need more information contact your authorized Fender Dealer.
MUSICMASTER BASS

Cutaway Body Design
Permits easy playing of all frets

Modern Head Design
Places keys on one side of head for easier tuning

Fast Action Neck
Rosewood fingerboard on maple neck with adjustable truss rod for perfect alignment

Adjustable Bridge

Adjustable Pickup

Volume Control

Tone Control

Offset Waist
Easier to hold in sitting position (patented)
STRING HEIGHT ADJUSTMENT
There are four string height adjustment screws, as shown. To raise the strings turn the adjustment screws clockwise. To lower the strings turn the adjustment screws counter-clockwise, (Fig. 1).

Low string action makes for easier playing but if the strings are too low they will buzz on the frets.

STRING LENGTH ADJUSTMENT
There are two string length adjustment screws, as shown. If a string sounds flat when played at the twelfth fret, compared with the open string harmonic at the same fret, the adjustment screw should be turned counter-clockwise to shorten the string. If a string sounds sharp to the harmonic, the screw should be turned clockwise to lengthen the string, (Fig. 1).
ADJUSTABLE NECK TRUSS ROD

The Neck Adjustment Screw is located at the body end of the neck. If the neck is bowed away from the strings the screws should be tightened (clockwise). If the neck is bowed toward the strings the screw should be loosened (counterclockwise). Use a flat head screwdriver with a tip approximately 1/8" wide (too large a tip will damage the pickguard). Usually a quarter turn or less is required. While turning the screw it is helpful to apply pressure to the neck in the same direction as the required adjustment, (Fig. 2).

PICKUP

There are two height adjustment screws, one at each end of the pickup. Turn the screws clockwise to raise and counterclockwise to lower the pickup.

FIGURE 2
ACCESSORIES FOR YOUR BASS

CASES
Covered with durable scuff-resistant vinyl and single-stitched. Accessory compartment is provided.

FENDER ELECTRIC STRINGS
They finger beautifully with consistent tonal quality and long life expectancy. Plus they are designed to match perfectly with Fender Guitars and Basses.
BASS AMPLIFIERS

MUSICMASTER BASS AMPLIFIER
- 12 watts RMS with 26 watts peak music power
